JOURNAL OF CRYSTAL GROWTH

www.elsevier.nl/locate/jcrysgro

Subject index

Convection 170, 201

Device characterization
- electronic materials 228, 263, 345
- heterojunctions 26, 33
- quantum wells 131, 355
Diffusional control
- of heat 91
- of mercuric iodide 263
- of oxygen transport 233
- of segregation 360
- of water ammonium chloride 183

Electronic materials, see Device characterization
Epitaxy, see Thin film growth

Heat flow control
- of laser irradiation 82
- of wafers 201
Heterojunctions, see Device characterization
Hydrodynamics, see Convection

Kinetics
- of growth 65, 91, 102, 138,145, 189, 223, 255, 320, 416, 422
- of interface control 131, 223
- of nucleation 131, 189, 211, 274, 416, 422

Lasers, crystals for
- infrared 145
- ultraviolet 151

Melt growth technique
- by Bridgman–Stockbarger method
- - of calcium gallogermanite 302
- - of gallium antimonide 360
- - of germanium 360
- - of indium bismuth antimonide 40
- by Czochralski method
- - of aluminum nickel cobalt 217
- - of lithium vanadate 383
- by floating zone method
- - of yttrium borate 378
- by uniaxial solidification
- - of sodium iodide 441
- by zone melting
- - of zirconia 281
Morphological stability
- of 4H silicon carbide 255
- of 4-cyano 4′-decyloxybiphenyl 332
- of indium gallium arsenide 1
- of polar crystals 138

Nucleation
- of aluminum nitride 13
- of ammonium sulphate 393
- of gallium nitride 13, 55
- of metastable phases 211
Numbers
- Peclet 233

Phase diagrams
- of aprotinin 311
Precursor
- for gallium nitride 47

Quantum wells, see Device characterization

Solid growth technique
- by polymorphic transformation
- - of beta-estradiol 320
Solution growth technique
- by constant composition method 416, 422
- by flux method
- - of copper iron selenide 271
- - of hydroxyapatite 410
- - of uranium arsenide and antimonide 250
- by low temperature method
- - of hen egg white lysozyme 161
- - of potassium dihydrogen phosphate 404
- - of protein crystals 429
- - of tin selenide 157
Surface morphology
- of gallium nitride 349
Surface structure
- of silicon carbide 115

PII: S0022-0248(00)00580-7

Thin film growth, epitaxy
- by chemical solution decomposition 388
- by metalorganic molecular beam epitaxy
- - of lithium niobate 287
- by molecular beam epitaxy
- - of aluminum gallium arsenide 355
- - of aluminum gallium indium phosphide 345
- - of gallium arsenide 26, 355
- - of gallium nitride arsenide 26
- - of gallium selenide 371
- - of indium gallium arsenide 1, 33
- - of indium gallium phosphide 33
- - of zinc oxide 131
- by vapor phase epitaxy
- - through chemical vapor deposition
- - - of silicon carbide 115
- - - theory of simultaneous etching and growth 98
- - through metalorganic chemical vapor deposition
- - - of aluminum nitride 13
- - - of gallium boron nitride 109
- - - of gallium nitride 13, 40, 55, 65, 228
- - - of zinc selenide 366

Vapor growth technique
- by evaporation and condensation
- - of cadmium telluride 102
- - of lead calcium sulphide selenide 125
- - theory of gas solid thermodynamics 109
Vapor–liquid–solid growth
- of free argon clusters 449

Whisker growth
- of zinc oxide 274
